Dear Jan and Joris,

Bridge project Suriname: Design, Engineering, Production and supply of a 43,75 m1 pontoon bridge, for the loading and off-loading of Ferry ships sailing from and to Guyana, including the supply of a manual for the erection and launching of the Bridge.

The purpose of this letter, is to confirm that Dijkstaal International B.V. was rewarded the order for the supply of the above mentioned bridge, including manuals and drawings.

The design of the bridge complied with the local demands and regulations as communicated.

The production of the bridge-parts was executed accurate and precise, as we did not encounter any fitting problems during the erection and launching of the bridge, that was performed by a local crew.

The provided manual and drawings were very helpful during the building of the bridge. For us this project was a good and positive experience with Dijkstaal International B.V.

If in the future, other bridge projects will be awarded to our company, we will invite Dijkstaal International to quote for these projects, and we look forward to future cooperation with this company.

Best regards,

KBO
